

1 CLAIMS

2

3 What is claimed is:

4

5 1. A system for synchronizing data between applications having respective data
6 stores, said system comprising:

7

8 two or more application service adapters associated with said application data
9 stores;

10

11 a links table for managing shared integration data;

12

13 an integration engine having associated therewith an integration engine service
14 adapter and an integration engine data store; said integration engine to use said
15 links table to manage the flow of information among all said data stores.
